WONG MAN CHONG IVAN

Business Analyst | Data Engineering, BI & Cloud Automation
wencong0421@gmail.com · +60 16-346 7606 · linkedin.com/in/wongmanchongivan
Johor Bahru, Malaysia

Summary

Business Analyst and de facto data engineer who owns a multi-country retail group's data platform end to end, from Azure data ingestion and SQL warehousing to the governed Power BI reporting leadership reviews every morning. Took over a vendor-built platform with no prior Azure experience and now runs its pipelines, semantic models, access security and cost governance: resolving production incidents, reconciling reports against source systems, and replacing manual workflows with automation. Business Analytics graduate (Dual Award, Sunway University & Lancaster University; Second Class Honours, Division One) with Microsoft Business Analyst and Google Business Intelligence professional certificates.

Experience

Lavender Confectionery & Bakery — Johor Bahru, Malaysia
Business Analyst — Apr 2026 – Present

- Sole in-house owner of the company's data platform since the original vendor's exit: Power BI semantic models (sales, disposal, forecast, manufacturing and inventory) and the Azure stack behind them (Azure Functions, ADLS Gen2, Synapse dedicated and serverless SQL, 20+ daily pipelines), delivering leadership reporting for Malaysia and Singapore outlets before working hours.
- Restored the weekly forecast pipeline used by Operations, Production and Purchasing after a 3.5-week outage caused by Microsoft retiring a legacy SharePoint authentication method: root-caused the failure, migrated to certificate-based Microsoft Entra ID authentication, and rebuilt and redeployed the Azure Function package via Cloud Shell while coordinating escalation with IT and leadership.
- Stabilised daily data extraction: fixed a 6-week silent Synapse pipeline failure (validated through a Git branch and PR review), recovered undocumented Function App source code into the platform's first Azure DevOps repository, and ended recurring API rate-limit failures by re-sequencing 14 extraction functions from Application Insights (KQL) runtime analysis.
- Reconciled a ~2.5% revenue gap between Power BI and the point-of-sale system of record, tracing it to hard-coded category exclusions in a SQL script; introduced a governed category-mapping standard and a bill-and-item-level reconciliation method now used for every discrepancy.
- Led an Azure cost review with a phased plan to cut monthly platform cost by ~70%: retired an idle machine-learning workspace and unused pipelines, and retimed the SQL pool and 20+ pipelines so reporting is still ready before working hours, with failure alerting through Azure Monitor.
- Built governed Power BI models and reports for 25+ outlets, including TREATAS-based cross-domain branch filtering, Row-Level Security by region and area manager, a symmetric (MAPE-based) forecast-accuracy measure, and an auto-refreshing daily sales report that replaced a manual Excel report holding 863 formula errors.
- Automated manual reporting: a Python pipeline consolidating 72 historical forecast files (4 formats) into a governed SQL and Power BI dataset; Python compilation pipelines for the weekly production forecast and the monthly closing-stock report; and Power Automate flows for supplier e-invoice intake and a ticketed BA request system (Forms, Teams, Excel).
- Built a loyalty-membership analytics capability from scratch: API extraction on Azure Functions (Flex Consumption) with Key Vault and managed identity, ADLS and Synapse serverless SQL, a Power BI semantic model and an 8-page dashboard, after validating join keys against POS data and excluding data-quality outliers.
- Built a custom, read-only local MCP server (Python) over the point-of-sale API so sales and stock questions can be analysed in plain language through Claude, and piloted natural-language querying of the Power BI model via MCP for the Operations team.
- Briefed the CEO on governance for agentic AI, and led colleagues in adopting AI tooling (MCP servers, connectors and plugins), including configuring the setup on their laptops.
- Documented the platform in a 53-sheet Azure data dictionary (45+ pipelines, 49 SQL tables) and Power BI data dictionaries, and coordinated vendor deliverables, including an AI kitchen-dashboard trial.

Lavender Confectionery & Bakery — Johor Bahru Region, Malaysia
Outlet Retail Auditor (Part-time) — Jul 2026 – Oct 2026

- Audited outlets across the Johor Bahru region on a monthly cycle for SOP compliance, cash handling, sales transactions, petty cash and stock control.

- Took over full regional audit coverage after a colleague's resignation, keeping every Johor Bahru outlet on its monthly cycle.
- Flagged system-versus-physical stock discrepancies and cash-control variances for reconciliation and corrective action; documented each audit with photographic evidence and submitted reports on deadline.

Rimbun Capital Kuala Lumpur, Malaysia
Technical Business Analyst (Intern) Jan 2026 – Mar 2026

- Led development of a centralised Asset Portfolio System for high-value company assets, designing the Dataverse backend schema for data integrity.
- Acted as primary liaison between senior stakeholders and the technical team, translating operational needs into Business Requirement Documents (BRDs).
- Built Power BI dashboards on asset valuation, status and location to help management spot underperforming assets.
- Prototyped a GenAI legal assistant (ChatGPT Enterprise) for corporate-recovery documents and an OCR pipeline (AI Builder + Power Automate) that extracts balance-sheet figures from company-registry (SSM) PDF filings.

Projects

Alford: Web-Based Power BI Reporting System Final Year Project, Sunway University · Sep 2025 – Jan 2026
Independently built and deployed the full web application (HTML, CSS, JavaScript) on Netlify, integrating web-based data with Power BI for automated, remotely accessible reporting; co-developed the Power BI reports with a teammate.

EZBot Procurement Management System Dec 2025
PHP and MySQL web system with role-based employee and manager access: Purchase Request and Goods Received Note workflows, PO-linked items, urgency prioritisation, bulk approval, PDF requests and ERP-ready CSV exports.

Site Visit App · Custom GPT Agents Rimbun Capital internship · Jan 2026 – Mar 2026
Mobile-first Power Apps app on Power Automate and Dataverse; custom GPT agents (Power Automate Flow Master, Legal Strategist).

Education

Sunway University & Lancaster University (Dual Award) Apr 2024 – Apr 2026
Bachelor of Business Analytics (Honours), Second Class Honours (Division One)
CGPA 3.21/4.00 · Dean's List, September 2024 semester

Sunway College Johor Bahru Mar 2022 – Mar 2024
Diploma in Business Administration · CGPA 3.00/4.00

Certifications

Professional certificates: Microsoft Business Analyst (Sep 2026) · Google Business Intelligence (Sep 2026)

Skills

Cloud & Data Engineering: Azure Synapse Analytics (pipelines, dedicated & serverless SQL) · Azure Functions (Python) · ADLS Gen2 · Azure Monitor & Application Insights (KQL) · Microsoft Entra ID · Key Vault · Azure DevOps & Git · Azure CLI / Cloud Shell

BI & Analytics: Power BI (Desktop & Service) · DAX · Power Query (M) · Row-Level Security · Data Modelling · Tableau · Excel (VBA) · IBM SPSS · KNIME

Programming: SQL / T-SQL · Python (pandas, openpyxl) · KQL · R · HTML / CSS / JavaScript · PHP · MySQL

Automation & AI: Power Automate · Power Apps · Dataverse · Microsoft Forms · SharePoint · Microsoft Graph API · AI Builder (OCR) · Claude & MCP integrations · Custom GPT agents · Prompt engineering

Business Analysis: Requirements & BRDs · Stakeholder management · Data governance and documentation · Reconciliation · Process improvement · Internal audit · Agile / Scrum · Lean Six Sigma

Languages

English (Proficient) · Mandarin (Native / Bilingual) · Cantonese (Native / Bilingual) · Malay (Proficient)
